

## JY/H-3034P

### Neonatal Injection Training Arm , Universal

The neonatal injection training arm can be used for healthcare personnel to practice neonatal IV injections and transfusions, blood collection and aseptic techniques.

It's a Replica of a life-size neonatal arm with accurate anatomy structures and clear landmarks and it adopts ultra-thin simulated material to mimic neonatal skin tissue.

There's obvious "POP" feeling when needle punctures at injectin sites and penetrates into the vein.

The skin and veins support repeated needle punctures, and are easy to repalce during use.

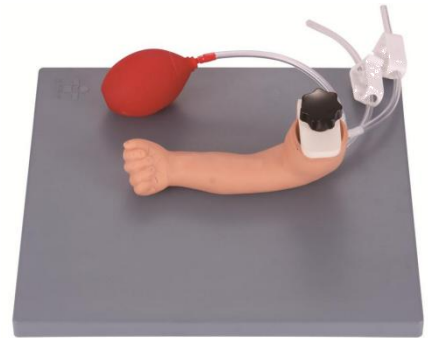

It can be used for the following training programs:

Supports IV injections and administration

Supports blood transfusion and collection

Supports practice of aseptic techniques

**\*Manually squeezes the bulb to simulate artery pulses, which can help to facilitate puncture localization.**

Material: vinyl

3 options of complexion are available:  
Light, Dark, Neutral/Universal

Skin For Choose

Minimum order quantity for your choice of dark complexion is 20 units.

Packing List	
Item Specification	Quantity
