

JY/M-Baby

Baby Jack Newborn Resuscitation Simulator, Dark

The simulator is a replica of a full-term newborn baby with realistic anatomical structure and detachable umbilical cord.

It features appropriate overall dimensions, body proportions and anatomical landmarks, ideal for practical newborn care training.

It comes with lifelike facial features, including mouth and nasal passages, enabling realistic airway management training.

It can support the following functions:

1. Airway and Breathing

1) open the airway by head tilting and chin lifting;

2) supports upper airway suction and aspiration practice;

3) Realistic chest rise can be seen during positive pressure ventilation.

2. Circulation and Heart Activity Assessment Two methods can be used to assess the simulated heart activity:

1) Pulse beats in the sealed umbilical stump.

The pulse can be felt when the umbilical stump is held between thumb and forefinger;

2) Heart sounds in the area between the chest nipples. It is audible.

3. Umbilical Cord Care By attaching the separate umbilical cord to the umbilical cord stump through the twist mechanism, umbilical cord cutting, clamping and ligation can be practiced.

***Airway obstruction / Choking**

Comes with some small blocks to simulate blocked airway for practice of Heimlich maneuver.

Material: vinyl

3 options of complexion are available:
Light, Dark, Neutral/Universal

Skin For Choose

Minimum order quantity for your choice of dark complexion is 20 units.

Packing List	
Item Specification	Quantity
