

## JY/L-1021H

# Epidural, Spinal Anaesthesia and Lumbar Puncture Training Simulator

The simulator represents an adult lower torso with accurate anatomical structures of the lumbar spine, showing lumbar vertebrae, sacrum and coccyx.

It supports both upright and lateral decubitus puncture procedures.

It can be used for the following training programs:

1. With realistic tissue, upon needle insertion, resistance can be felt, and when the needle is injected into the correct position properly, a loss of resistance occurs and simulated cerebrospinal fluid (CSF) will flow out.
2. Supports epidural anesthesia training
3. Supports spinal anesthesia training
4. Supports lumbar puncture training

The puncture position is often at the L3-4 spinous process, and aseptic techniques can be practiced before lumbar puncture.

*\*General anesthesia and caudal anesthesia can also be practiced with this simulator.*

*Comes with palpable anatomical landmarks (iliac crest and spinous processes L3/L4 and L4/L5) for easy user orientation to access points.*

Material: vinyl

3 options of complexion are available:  
Light, Dark, Neutral/Universal

Skin For Choose

Minimum order quantity for your choice of dark complexion is 20 units.

Packing List	
Item Specification	Quantity
Syringe (50ml)	1
Lumbar puncture needle	1
Infusion bag	1
Carrying case	1
Instruction manual (in English, French and Spanish)	1
Warranty card	1
