

JY/F-0030 Female Contraception Practice, Light

The pelvic model shows accurate anatomical structures such as pelvic cavity, external genitalia, vaginal canal, cervix, uterus, and fallopian tube structures, and the color is realistic. Can be put on the table directly for operating demonstration. Simulates anteversion uterus, fallopian tubes, labium, vagina and transparent abdominal wall cover in the pelvic cavity. Expansion of vagina and the use of vaginal speculum. The cervix dilatation of accurate size helps to insert MVA instruments. The uterine part includes a uterine cavity with a realistic endometrial lining, which is used for the training of uterine curettage.

Material: soft, flexible vinyl

3 options of colors are available: Caucasian, Asian and African.
